Start with a piece of dough from each of the primary colors (

Some materials let certain colors pass through them, and absorb other colors. These materials are called dyes or pigments. The primary colors of pigment are red, yellow, and blue. The secondary colors can be mixed to create other colors.

A primary color + a primary color = a secondary color. The secondary colors are green, orange, and purple.

You can mix primary colors with primary colors to make secondary colors. The primary colors are red, yellow, and blue.

Secondary colors to make primary colors.
